GENERAL NOTES

The owner/contractor shall verify all dimensions and site conditions before starting work. The owner/contractor shall notify the Building Codes Division of any discrepancies, changes, omissions, or substitutions that are not permitted without the approval of the Building Department having jurisdiction. All workmanship shall conform to Oregon Residential Specialty Code.

The structure is designed to function as a unit upon completion. The owner/contractor is responsible for methods and sequences of assembling the structure. The owner/contractor is responsible for the stability of the structure during the construction and prior to completion of all walls, roof, and floor diaphragms.

CONCRETE

Exterior walls shall be supported by continuous solid concrete foundations and shall extend below the local frost depth. (Check with your local Building Department for your frost depth).

Foundations and slab on grade shall have a minimum compressive strength of 2500 psi.

Finish grade shall slope 6" in the first 10'-0" away from the building.

Exterior siding shall be 6" minimum above finished grade or pressure treated lumber.

The area within the foundation walls shall have all vegetation, top soil, and foreign materials removed.

LATERAL BRACING

Braced wall panels shall be 7/16" thick structural sheathing minimum 48" in length located at each corner and not to exceed 25' o.c. as indicated on floor plan. Openings are prohibited in these locations. Nail spacing shall be 8d common nails 6" o.c. for edges and 12" o.c. for field nailing. Plate washers a minimum 3"x 3"x 0.229" shall be provided for the anchor bolts at each 48" braced wall panel.

Studs shall be continuous from foundation sill plate to wall top plate. Asphalt saturated felt or other approved material shall be applied over exterior wall structural sheathing.

ROOFS

All trusses are required to be designed and stamped by an Oregon registered engineer.

All anchor bolts to have 3" x 3" x 0.229" plate washers at braced wall panels.

1/2" x 10" anchor bolts 6'-0" o.c. on 2 x 6 P.T. sill plate.

EMBED ANCHOR BOLTS 7" MINIMUM DEPTH
1/2" x 10" anchor bolts 6'-0" o.c. on 2 x 6 P.T. sill plate on 8" CMU

#4 horizontal top & bottom, and #4 vertical 4'-0" o.c.

1/2" x 10" anchor bolts 6'-0" o.c. on 2 x 6 P.T. sill plate.

#4 horizontal top & bottom, and #4 vertical 4'-0" o.c.

8" CMU stemwall on a 6" hgt x 12" wide concrete ftg.

FOOTINGS MUST REST ON UNDISTURBED SOIL 12" MINIMUM BELOW GRADE IN LANE COUNTY

PERMITS FOR ALL ELECTRICAL WORK SHALL BE SECURED FROM THE LANE COUNTY ELECTRICAL PROGRAM AT 3050 N. DELTA HWY, EUGENE, OR 97408

PLEASE REFER TO THE ATTACHED RESIDENTIAL CODE SUMMARY / MOST COMMONLY MISSED ITEMS. THIS ATTACHMENT IS PART OF THE APPROVED PERMIT PACKET AND MUST REMAIN ON SITE AT ALL TIMES. PLEASE READ AND INCORPORATE THE ITEMS PERTINENT TO THE SCOPE OF THE WORK INTO THE CONSTRUCTION.
Garage floor surface shall be:
1. of an approved noncombustible material and
2. be sloped to facilitate the movement of liquids
to a drain or toward and out of the main
vehicle entry doorway.

Optional door 36" x 80"

Door and window openings prohibited in braced wall
panel locations typical.

Optional windows either side or
both sides 72" x 48" or smaller
with 6" x 8" df header or equal
and two jack stud each side.

Hatched areas indicate braced
wall panel locations typical.

Flash all fenestrations.

Garage door headers see schedule Sheet
S01. Two jack studs each side.
Composite shingles with two layers 15 lb felt over 1/2" structural sheathing nailed with 8d common nails 6" o.c. at edges and 12" o.c. in field. Roof sheathing nailing at gable end walls shall be 6" o.c.

Engineered trusses only at 24" o.c.

Rotation blocks. Blocking. See truss engineering. Submit (2x) two copies of truss engineering and truss layout drawing, stamped by an Oregon licensed engineer.

H-2.5A clips each truss nailed to wall top plates. (Unless noted otherwise on truss engineering.)

Optional wall/ceiling drywall. If drywall applied to ceiling, attic ventilation 1/150 required. If insulation is installed, install vapor barrier on warm side.

Non-structural panel siding with approved moisture barrier over 7/16" structural sheathing on 2 x 6 df grade #2 studs at 16" o.c. with 8d common nails 6" o.c. at edges and 12" o.c. at field.

Structurally graded panel siding 7/16" may be used without structural sheathing. 8d common nails shall be 4" o.c. panel edges and 8" o.c. field nailing for the 48" braced wall panel zones as indicated on plans.

Note: any heated or semi-heated space must comply with current energy codes according to use. Coordinate at the time of building permit application and prior to construction and apply for mechanical and electrical permits.
Plans may be modified in the following ways and remain ready-build plans. The local jurisdiction must verify that the plan design criteria meets or exceeds the associated site criteria.

- Specified eave height is the maximum height. Eave height may be reduced.
- Specified roof pitch is the maximum pitch. Pitch may be reduced to 3:12.
- Specified frame spacing is the maximum spacing. Frame spacing may be reduced.
- Specified length is the maximum length. Length may be reduced, but must not be less than the width specified on the plan. Allowed openings must be reduced by the same length that was removed from the overall building length.
- Openings shown may be changed to walls except one three-foot wide by six-foot, eight-inch tall side-hinged door must be provided somewhere on the exterior. This inch tall side-hinged door must be provided somewhere on the exterior.

The division does not approve modifications to the plans. Plan modifications beyond the limits indicated above are expressly subject to local jurisdiction approval on a site-specific basis. Indicated above are expressly subject to local jurisdiction approval on a site-specific basis.

LANE COUNTY DOES NOT APPROVE MODIFICATIONS TO READY-BUILD PLANS BEYOND THE LIMITS INDICATED ABOVE.

USE OF READY BUILD PLANS IMPLIES ACKNOWLEDGEMENT OF THESE REQUIREMENTS
