

Managing C&D makes good 'cents'

Approximately 600 million tons of C&D debris were generated in the United States in 2018, more than twice the amount of municipal solid waste produced.

Recovering used—but still valuable—C&D materials for further use is an effective way to *save money while protecting natural resources*. Reusing materials offsets the use of new materials and conserves landfill space.

The best practice is to sort C&D materials on-site for the highest recovery and disposal cost savings.

You can help divert C&D materials from disposal in many ways, including:

- Source reduction
- Salvaging
- Recycling and reusing existing materials
- Buying used and recycled materials and products

Lane County deconstruction project

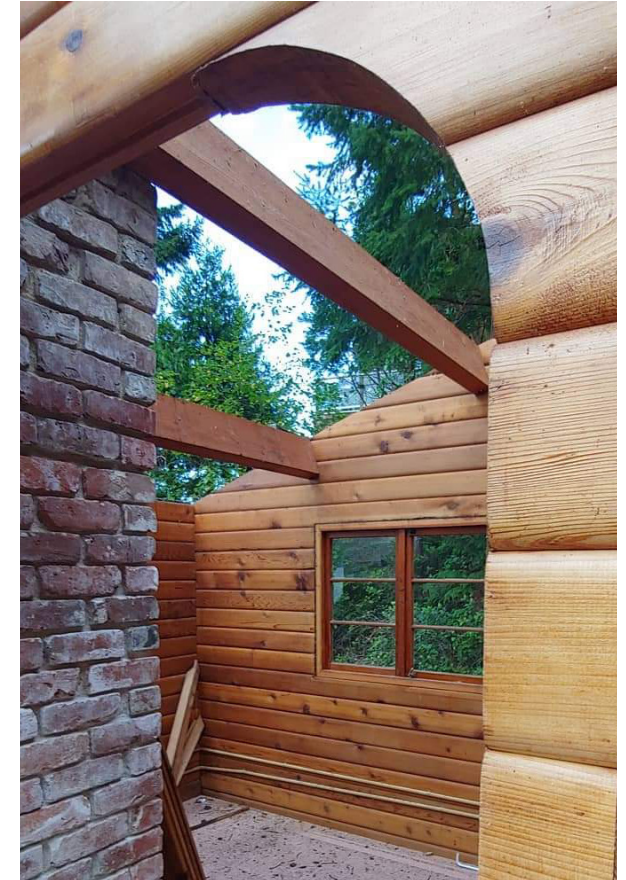

How it works

1. Download a *Construction Materials Management Plan* template and a *Waste Tracking Log* at lanecountyor.gov/construction-waste.
2. Set aside reusable fixtures, doors, dimensional lumber, and architectural salvage materials. Take reusable materials to BRING and Habitat for Humanity for FREE.
3. Collect metal and wood in separate boxes on site. Take source-separated materials to metal and wood recyclers to save money.
4. If necessary, take mixed C&D materials to EcoSort for sorting.
5. Dispose of any remaining dry waste at Delta Sand & Gravel or Short Mountain Landfill.
